

Dr Gifford Jones Medi-C Plus contains Vitamin C, one of the most important vitamins for the human body. Vitamin C is responsible for building collagen that strengthens the coronary cells, vital for the proper functioning of the cardiovascular system and is a natural antioxidant. Humans cannot produce vitamin C naturally and need to obtain it through food and supplements.

What is Medi-C Plus?
Medi C Plus is a special nutritional supplement, containing Vitamin C, Calcium, and L-lysine, all of which are important for the proper functioning of the cardiovascular system. Vitamin C and L-lysine work together to build the collagen that maintains the walls of the blood vessels and strengthens the coronary cells. Medi C Plus produces healthy collagen, dissolves cholesterol deposits, increases blood flow and reduces the risk of cardiovascular disease.

Who Should Take Medi-C Plus?
Medi C Plus is recommended to anyone suffering from high cholesterol, cardiovascular disease or someone at risk for heart disease. If you're suffering from high blood pressure, Medi C Plus can improve your cardiouvascular function and help you lead a healthier lifestyle. Moreover, the product also has positive effects on mood and anxiety, and helps in the process of renewing and repairing the skin. Collagen production generally slows down with age, which leads to cracks appearing between the coronary cells. Medi C Plus is recommended to people with cardiovascular problems, especially the elderly. Medi C Plus can greatly reduce your risk of cardiovascular disease and can effectively protect you from hearth attack.

The high dosage of Vitamin C in Medi C Plus can help with a variety of other health issues, including splitting hair, dry and rough skin, and decreased immunity. If you're a smoker, you might also consider including the supplement into your dietary plan, as smoking can seriously decrease the

vitamin C levels in the body. Vitamin C also helps your body fight stress, physical, and mental, and can greatly improve your general health and well-being. Lysine cannot be produced naturally by your body and needs to be obtained otherwise.

How Does Medi C Plus Work?

Medi C plus dissolves the cholesterol deposits and lowers the blood pressure, thus reducing the risk of cardiovascular disease. By strengthening the blood vessels, Medi C Plus also increases the blood flow to coronary arteries, and prevents the formation of free radicals, which are harmful for your health. Without enough vitamin C, the collagen in the cell weakens and this could lead to a variety of health problems, such as heart attack. Medi C Plus was developed by Dr. Gifford Jones and is based on the combination of Vitamin C and Lysine.

The combination of vitamin C and lysine in Medi C Plus strengthens your bones and helps them grow and repair quickly after a trauma. The Lysine has also been implicated in preventing herpes outbreaks, and increasing the diameter of vessels and thus, improving the blood flow. Generally, the lysine is essential for your good cardiovascular health and it’s important part of every healthy dietary plan.

How To Take Medi C Plus

Medi-C Plus comes in powder and capsules. The recommended dosage for the Medi-C Plus powder is dissolving one to two level scoops (5g) in 250 ml of water or juice once a day. For the Medi-C Plus capsules, take 5 capsules once or twice daily or as directed by a health practitioner. Medi-C Plus powder Berry is a great option too.
